

The background is a night-time aerial view of a city, likely Palermo, with its lights glowing against a dark sky. Overlaid on this is a large, stylized '5G' logo. The numbers are filled with a white circuit board pattern and have a blue glow. Numerous glowing blue arcs and lines connect various points across the city, suggesting a network or data flow.

# 5GASSAC - Project Overview

CEF first Call

European Union: **CEF DIGITAL**  
**5G infrastructure deployments**  
5G corridors  
**5G for Smart Communities**

**CEF Digital** aims to leverage public and private investments in digital connectivity infrastructures of common European interest: **1 Gbps for families, 5G in high-density population areas, IoTs connection, 5G backbones, European 5G powered Clouds, Digital European Ecosystems transformation, Innovative Use Cases**

# 5GASSAC - Project Overview

## SCOPE

**5G4ASSAC** implements a **5G MPN** to unlock innovative and unique services based on AI, ML, AR/VR technologies, allowing intense **Adaptive Learning** and **Higher Student Engagement** and **Telemedicine Services development**.

Supporting new functional approaches to education and training, the Project develops the **Mixed Reality (XR) Learning Platform** and the **eHealth Learning & Management System** that, running on the 5G MPN, will enable immersive education experiences in both universities and hospitals and create interactive clinical scenarios based on IoT and Analytics for a 'Learning by Caring' approach thanks to the eHealth LMS.

## STAKEHOLDERS

**Coordinator**

Università  
degli Studi  
di Palermo

**Beneficiary**

# 5GASSAC - Infrastructure

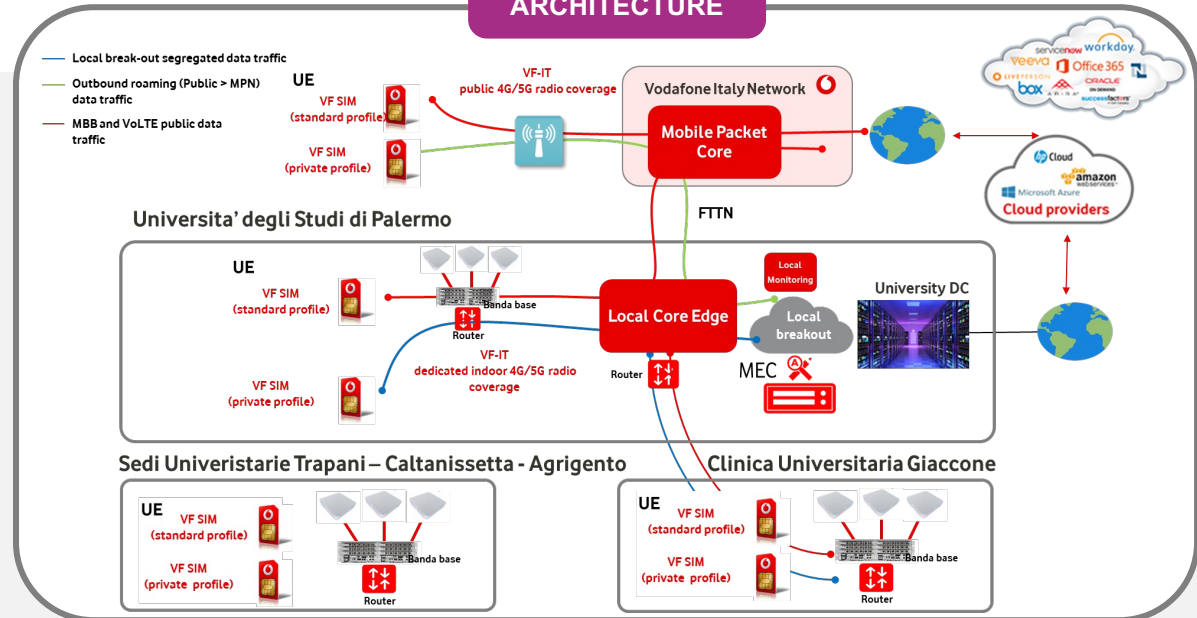

## KEY FEATURES

- **Data transmission speeds up to 10x faster** than current ones
- **30x to 50x lower latency** than current services
- **Limited energy consumption**
- **Massive machine communication**
- **High reliability** and security
- **Seamless access from remote** to the Campus applications

## ARCHITECTURE

## GOALS

Support the **5G technology diffusion**, allowing researchers of University departments in **Palermo** and **Trapani** to fully exploit the advantages of **Remote Education** and **eHealth LMS** through:

- Intelligent Expert Systems
- Immersive Learning Systems
- 3D rendering and XR simulators
- Remote patients monitoring
- Remote medical analysis and consulting
- Clinical Decision Support Systems

# 5GASSAC - University of Palermo and Policlinico "Paolo Giaccone" (including TP site)

# 5GASSAC - UC Education

## Immersive learning

### Use Cases

Innovative solutions supporting **3D models and objects** generation and interactions using multiple 3D visor devices, VR/AR mixed reality, hardware and software platforms enabling teachers and students interaction with computer-generated 3D objects and augmented reality. Two applications: human anatomy, cultural heritage.

### Benefits

- **Innovative** and **Interactive** Learning Process
- **Stimulating** creativity and design
- Higher Student's attention and motivation to study
- Student's involvement in learning processes
- Reporting and Analysis

### Impact

- **Augmented Classrooms** installed in the University Campus
- New **Educational Models** using:
  - 3D models and objects for training activities
  - A/R fully immersive experience with virtual objects manipulation and movement: '*presence and agence*'

# 5GASSAC - UC Education

## 5GASSAC - XR Learning Platform

**LEARNING PLATFORM for AUGMENTED CLASSROOMS** development and implementation

**PRATICAL SCENARIO SIMULATIONS** with real-time teacher-student interactions

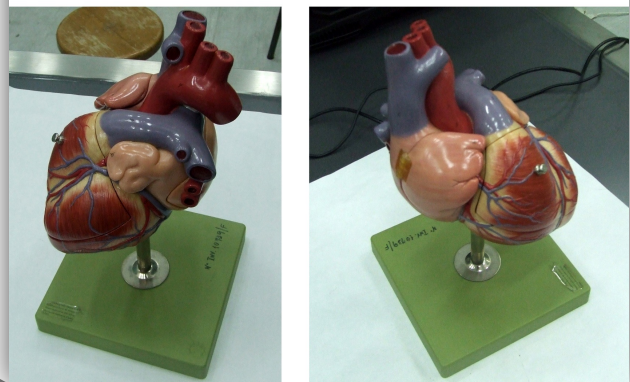

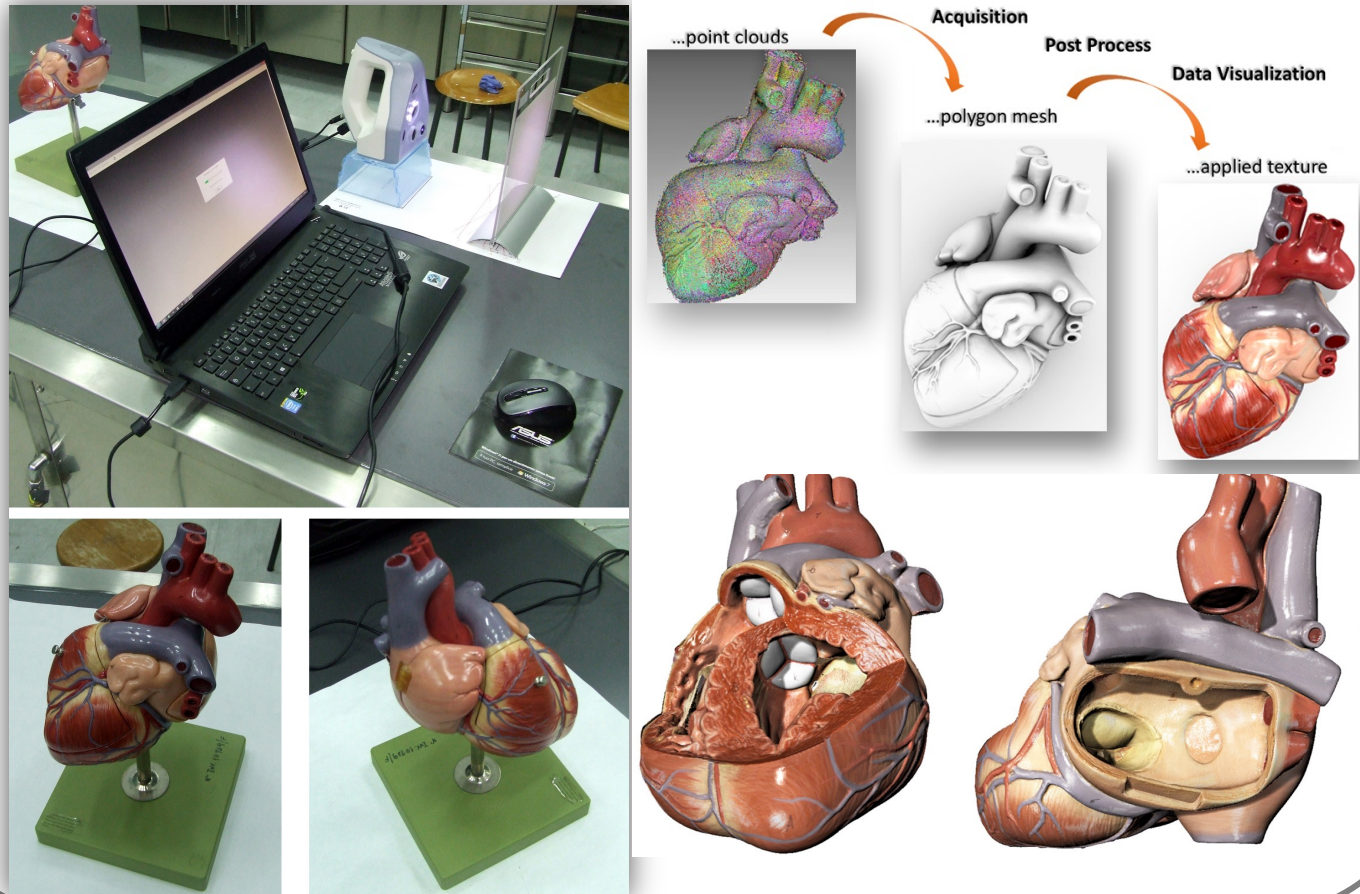

**E-LEARNING WITH AUGMENTED REALITY** integrating 3D models and objects

## Mannequin based Training System

### Use Case

#### Mannequin Training Systems.

Multiple solutions supporting (robotic) mannequin based hands-on. Patient-like mannequins and simulators for practical training, hands-on, clinical skills in the medical domain.

### Benefits

- Hands-on **creations**
- **In-lab** and **remote** lessons
- **Mannequin** based training
- Procedural and manual **abilities** development
- Reporting and Analysis

### Impact

- High student **engagement** and **involvement**
- **Tasks driven** training environment
- **1 training building** installed in the University Hospital
- Clinical skills understanding
- Advanced and real training for physicians and nurses

# 5GASSAC - UC Education

## Mannequin based Training System

# 5GASSAC - UC eHealth

## Medical Imaging

### Use Case

**Real-time DICOM transfer.** Real-time DICOM volumetric medical image transfer (50 Mbit/s throughput) enables clinical remote collaborations and models involving sub-domain experts for remote diagnosis and second-opinion teleradiology services.

**4K/8K real-time audio-video streaming.**

### Benefits

- **Virtually** and **remotely** working
- Offering **specialized services** anytime
- **Diagnosis quality** anywhere, anytime
- Cost saving

### Impact

- **Collaborative** models for radiologist
- **Uniform** and **accurate** diagnosis process
- **Healthcare quality improvement** outside large urban centers

# 5GASSAC - UC eHealth

DICOM Client

PACS

5G enabled DICOM streaming

Consultation Hospital

Second Opinion

5G enabled 4K/8K streaming

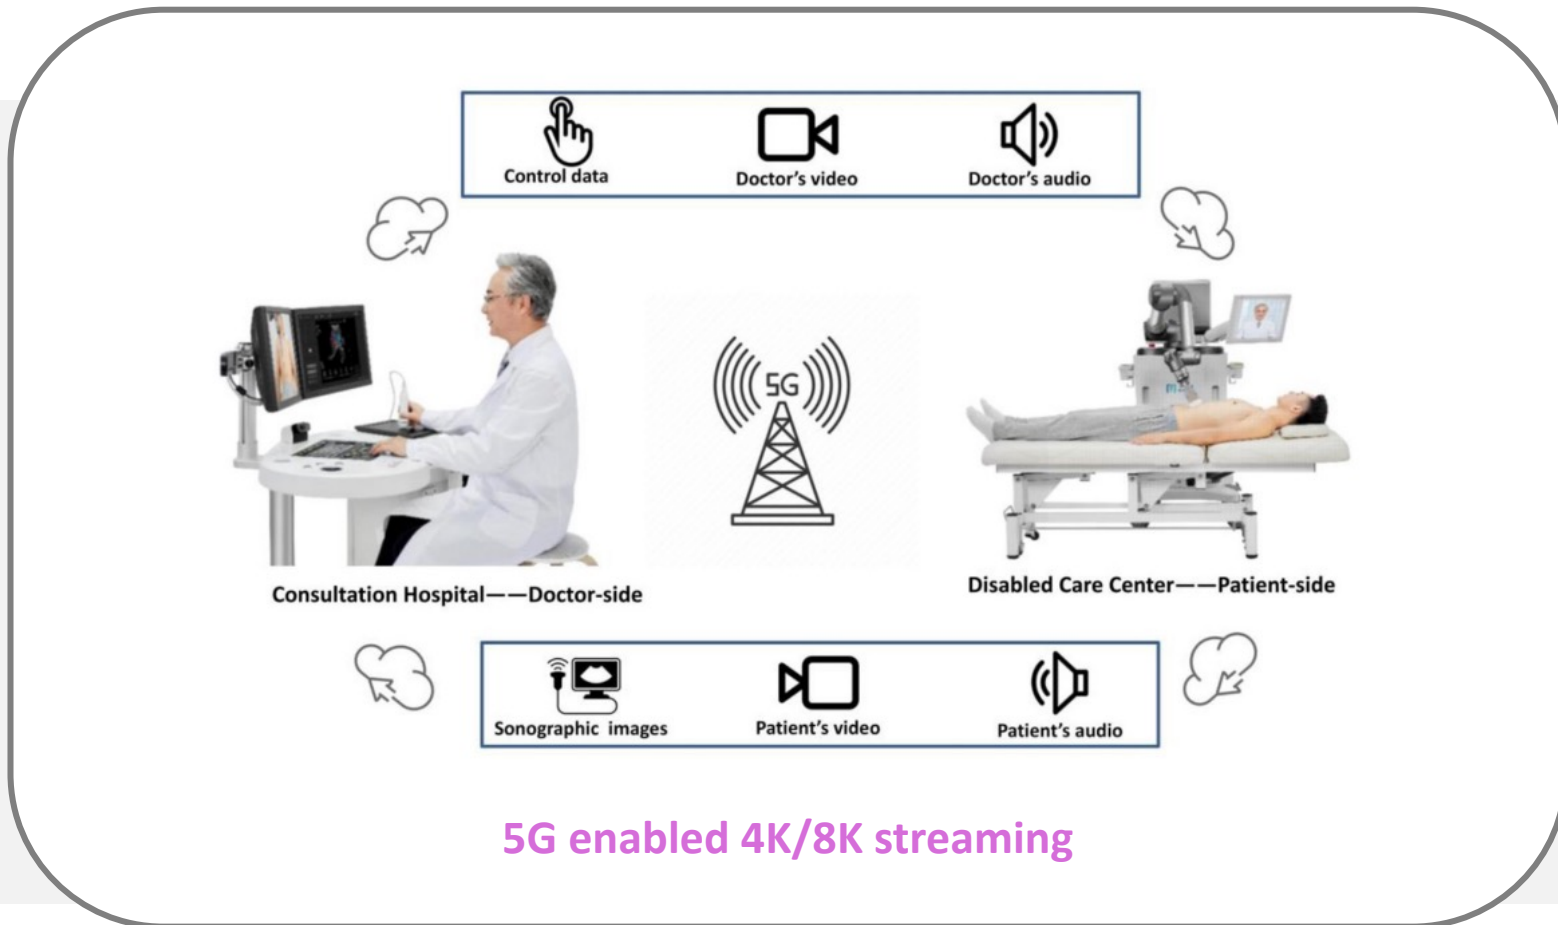

# 5GASSAC - UC eHealth - Remote Expert Consultations

5G enabled 4K/8K & DICOM streaming

# 5GASSAC - UC eHealth - Teleultrasound diagnostic system

## Decision Support Systems

### Use Case

**Clinical Decision Support System.** CDSSs can be accessed on **cloud platforms** in real-time. **Machine Learning** and **Deep Learning** models support the medical diagnosis process. CDSSs **improve diagnosis accuracy** even in the **early stage**.

### Benefits

- Medical diagnosis and treatments improvements
- Ad-hoc and case-driven examples and solutions
- Early and Personalized diagnosis
- Error rate reduction

### Impact

- Multi-centre and multi-source data (radiomic, -omic, clinical, etc.)
- Real-time validated health data availability and accessibility
- Real-time validated AI based models availability and accessibility
- International cooperation

A Yolo-Based Model for Breast Cancer Detection in Mammograms

Francesco Prinzi<sup>1</sup> · Marco Insalaco<sup>2</sup> · Alessia Orlando<sup>2</sup> · Salvatore Gaglio<sup>3,4</sup> · Salvatore Vitabile<sup>1</sup>

A night cityscape with glowing blue light trails and a large 5G logo with a circuit board pattern. The background shows a city at night with many lights and buildings. Overlaid on the city is a large, stylized '5G' logo. The '5' and 'G' are white with a blue circuit board pattern. The 'G' is larger and more prominent. There are several glowing blue arcs and lines connecting different points across the city, suggesting a network or data flow. The sky is dark blue with some clouds.
